

DURAFRAX® 2000 WEAR RESISTANT CERAMIC MILL LININGS

As an industry leader in developing and manufacturing engineered ceramic linings to fit virtually any type of milling equipment, Saint-Gobain Ceramics designs protective systems for complex ball mill linings including continuous, batch, vibratory, and attritor mills. Our Durafrax® linings incorporate an interlocking tongue and groove design to optimize wear liner life. Regardless of the size and shape of your milling equipment, Saint-Gobain Ceramics has the experience, expertise, and technical capability to solve your specific wear problems.

MATERIAL EXPERIENCE

- Alumina and Bauxite
- Calcium Carbonate
- Clay and Kaolin
- Feldspar
- Glass & Frit
- Limestone
- Magnesium
- Silica Sand
- Talc
- White Cement
- Zinc
- Zircon

We Sell Solutions

Analyzing a wear problem is a complex process. Our design engineers understand wear problems and specify solutions to suit your operational environment, material properties, engineering tolerances, attachment methods, and material cost are all considered in a Saint-Gobain Ceramics wear solution.

Durafrax® is a 90% fine-grain, high grade alumina made from exceptionally pure, uniformly controlled aluminum oxide. We have engineered it to be one of the best wear materials available for fine particle abrasion. Durafrax® offers excellent mechanical properties, superior wear resistance, and desirable corrosion performance.

Saint-Gobain manufactures Durafrax® 90% alumina tile in a variety of standard sizes and shapes that can be installed economically in the shop or in the field. Our engineers are industry leaders in application techniques, and they will work with you to determine the appropriate attachment method for your operating environment.

Tongue and Groove Liner Blocks
